

ATTENTION: NATURAL RESOURCES ENVIRONMENT AND GREAT LAKES COMMITTEE

As life long residents of Michigan, as taxpayers of this state, we wish to express our opposition to establishing a game season for wolves in our state.

The wolf has just recently been removed from the endangered list, we cannot believe it is sound scientific management to add this species to the game hunting list at this time. We sincerely believe the species needs to increase in numbers. It is always being said that the deer population is over abundant due to the fact that there are no natural predators and that the deer numbers cause too many car/deer crashes. However, the wolf, being a natural predator has been on the endangered species, has recently been removed and we strongly believe it should not be added to the hunting list at this time. We suggest that sound scientific management would be to leave the wolf OFF the hunting list.

Thank you for your time and we hope you will consider our concerns.
